Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information. Submission to this journal of an article entails the author's irrevocable and exclusive authorization of the Publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.
Special regulations for readers in the USA – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $2.25 also payable through the Center. (N.B. For review journals this fee is $0.25 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the Publisher for such copying.

PHYSICS REPORTS

A Review Section of Physics Letters

Over the years **PHYSICS REPORTS** has built up an international reputation as one of the leading review journals for diverse branches of physics.
PHYSICS REPORTS keeps the active physicist up to date on developments in relatively narrow fields, by publishing timely reviews which are more than just literature suveys but normally less than a full monograph. Each issue is devoted to one specific subject. These reviews are specialist in nature but contain enough material to make the main points intelligible to a non-specialist. The reader will not only be able to distinguish important developments and trends but will also find a sufficient number of references to the original literature.
Every month approximately 6 isssues are published and to date more than 1000 articles have appeared.

All issues of **PHYSICS REPORTS** are available to **individuals only** at a substantial discount, under our BULK ORDER SCHEME. In this way research workers and graduate students will be in a position to afford their own copy of a particular report. Depending on the issue size, the special prices range from US $7.00 to US $15.00.

In order to take advantage of this special offer, you and your colleagues can send your combined orders directly to the publisher, *providing the total order amounts to at least US $100.00 and is accompanied by payment (cheque, payment instruction).* By meeting this requirement, individual postage, handling and invoicing charges can be avoided. If you would like to receive the full listing of all **PHYSICS REPORTS** published to date - the **Physics Reports Bulk Order Scheme** - please send in the form (or a photocopy of it) below.

Please note that you may combine your order with issues of Surface Science Reports and Materials Science Reports, which are both available under a similar scheme.

REQUEST FORM

Please complete and return to:
Mr. H. de Brouwer
NORTH-HOLLAND (Elsevier Science Publishers)
P.O. Box 103, 1000 AC Amsterdam, The Netherlands

☐ Please send me the Physics Reports Bulk Order Scheme, listing all available Physics Reports.
☐ Please send me a copy of the Surface Science Reports Bulk Order Scheme.
☐ Please send me a copy of the Materials Science Reports Bulk Order Scheme.

JOURNAL OF MOLECULAR LIQUIDS

Editors:

W.J. Orville -Thomas, Department of Chemistry and Applied Chemistry, The University, Salford, Lancs., M5 4WT, UK

H. Ratajczak, Institute of Chemistry, University of Wroclaw, ul, Joliot-Curie 14, 50-383 Wroclaw, Poland

Assistant Editor:

A. Barnes, The University, Salford, UK

Aims and Scope:

The JOURNAL OF MOLECULAR LIQUIDS brings together work from a wide range of disciplines (chemistry, physics, biology, engineering, etc.) concerned with yielding information on the structure, dynamics and interactions in the liquid phase.
The journal publishes both primary papers and authoritative review articles covering all aspects of molecular liquid processes based on the increasing variety of experimental and theoretical methods now available.
Papers published fall into the following main categories:

- Simple molecular liquids and their mixtures
- Polymer liquids and solutions
- Liquid crystals and their mixtures
- Polymer colloidal solutions
- Molecular flow phenomena
- Phase transitions

Abstracted /Indexed in:

Chemical Abstracts, Current Contents: Physical, Chemical & Earth Sciences, INSPEC, PASCAL/CNRS

Subscription Information:

Vols. 47-50 (16 issues) US$ 616.25 / Dfl. 1140.00 ISSN 0167-7322

P.O. Box 882, Madison Square Station, New York, NY 10159, USA

Instructions to Contributors

Manuscripts should be sent to the Editor, or to an Associate Editor.
Contributions should be written in English and typed with double spacing. They should be submitted in triplicate, together with the original drawings and two copies of the figures, and must include a self-contained abstract of not more than 200 words.
The title should contain sufficient keywords for indexing. If this is not possible, additional keywords, for indexing only, should be listed on the title page.
Because of the interdisciplinary nature of the journal, authors are asked to write their paper in a manner understandable to their colleagues in other disciplines. Special attention should be paid to clarity in the introduction and the conclusions. All abbreviations and symbols should be defined on first use.
Contributors are asked to follow the recommendations of the commission for Symbols, Units and Nomenclature of the IUPAC.
Symbols of scalar quantities will be printed in italics. Vectors will be printed in bold face italics and should be indicated by wavy underlining in the typescript. Special attention should be paid to the clear distinction of characters which can easily be misread such as i (lower case), I (cap.), l (el lower case), 1 (one), ′ (prime); o (lower case), O (cap.), 0 (zero); u,v (lower case), ν (Greek nu), V (cap.); s, S; x, X, $\times$; p, P, ρ (Greek rho); k, K, κ (Greek kappa); etc. If necessary, unusual symbols should be explained in pencil in the margin.
All letters or groups of letters representing functions (exp, sin, log), units (cm, dyne, atm), chemical symbols or any abbreviations not representing a quantity (d-shell, MCD), names of places or organizations (NPL, MIT), should not be underlined in the typescript and should be typed without full stops.
The approximate position of the tables and figures should be indicated in the typescript.
Each table should be typed on a separate sheet, and be given a title as well as a serial number.
Line drawings should be originals, drawn in India ink and carefully lettered. The lettering as well as the essential details should have proportionate dimensions so as not to become illegible or unclear after reduction. Contributors should bear in mind that most illustrations will be reduced to journal column width (single or double). The lines must be distinct enough; this is particularly important for computer-generated graphs. If powers of ten are used in axis labels, they must be unambiguous: 'v, 10^4 cm^{-1}' or '$10^{-4}v$, cm^{-1}' is acceptable, '$v \times 10^4$ cm^{-1}' is not. The units in the figures should agree with those used only where absolutely necessary. They should be unmounted unless they form part of a composite figure. It is important to remember that the contrast in the printed version will be less than that of the original.
References should be consecutively numbered in the text, thus: 'Jones and Smith [1] have reported that ...', and listed at the end of the manuscript (after any appendices), stating the author, journal, etc., volume and year of publication (in brackets) and the number of the first page.
Example:
[1] S. Jones and P. Smith, Phys. Rev. 190 (1964) 32.
Whenever possible, references should be to published papers rather than to unpublished reports. References to papers originally published in languages other than English, but available in translation, should cite both the original and the translation. References to conference proceedings should give the date, editor(s) and publisher (if published as a separate book) or the journal reference (if published in a journal).
Footnotes should be avoided as much as possible.
Corrections in the proof should be limited to typesetter's errors; owing to the time-consuming and expensive work involved, authors may be charged for any other changes in the proofs. Therefore, the submitted paper should be in final form and carefully checked for typographical errors and inconsistencies.

Enrico Fermi International School of Physics, Volume 108

Photoemission and Absorption Spectroscopy of Solids and Interfaces with Synchrotron Radiation

edited by **M. Campagna and R. Rosei**

1990 xiv + 488 pages
Price: US $ 142.75 / Dfl. 250.00
Subscription price: US $ 121.50 / Dfl. 212.50
ISBN 0-444-88470-X

Presenting a timely overview of the current status of synchrotron radiation research, this volume includes the background fundamental theoretical aspects of the electronic structure of condensed matter and of condensed-matter interaction with photons.

Contents: Preface. Electronic structure of solids and surfaces and the relation to surface spectroscopies *(A. Liebsch)*. Theory of photoemission *(G.D. Mahan)*. Dynamical effects, screening and correlation in mixed-valence compounds *(B. Delley)*. Electronic and magnetic properties of interfaces *(O. Bisi and S. Ossicini)*. Properties of synchrotron radiation and instrumentation for photoemission and absorption spectroscopy *(C. Kunz)*. Core level spectroscopies and synchrotron radiation *(J.C. Fuggle)*. X-ray absorption and reflection in the hard-X-ray range *(B. Lengeler)*. Core level spectroscopy at silicon surfaces and interfaces *(F.J. Himpsel et al)*. Core level spectroscopy of metals, alloys and intermediate-valence compounds *(G.K. Wertheim)*. Inverse photoemission spectroscopy *(V. Dose)*. X-ray absorption fine structure of adsorbates: SEXAFS and NEXAFS *(J. Haase)*. Photoemission spectroscopy of interfaces *(G. Margaritondo)*. Photoemission experiments on small particles in gas suspension *(H.C. Siegmann and H. Burtscher)*. Clusters-structure, electronic structure and spectroscopy *(R.O. Jones)*. Surface magnetism and spin-resolved photoemission *(E. Kisker and C. Carbone)*. Photoelectron spectroscopy *(J.J. Barton and F.J. Himpsel)*. Laser photoemission *(F. Meier et al)*. Photoemission with circularly polarized photons *(U. Heinzmann)*.
